

## CAGRISEMA BLEND 10mg (Cagrilintide 5mg/Semaglutide 5mg) For Weight Loss

Our Product Introduction

for more products please visit us on peptide-powder.com

### Basic Information

- Place of Origin: China
- Brand Name: Hongbaiyi
- Certification: COA, HPLC MR
- Model Number: HBY-Cagrisema
- Minimum Order Quantity: 5 boxes
- Price: negotiable
- Packaging Details: 10mg/vial, 10vials/box
- Delivery Time: 3-5 work days after your payment
- Payment Terms: MoneyGram, Western Union, T/T
- Supply Ability: 20,000 boxes/month

### Product Specification

- Name: Cagrisema Weight Loss
- CAS No.: 910463-68-2
- Molecular Formula: C187H291N45O59
- Molecular Weight: 4114
- Storage Temp: Peptides Should Be Stored In A Dry, Cool, Dark Place. For Best Preservation, Store At 4°C Or Colder Away From Bright Light.
- Specification: 10mg/vials,10vails /box

### Product Description

Cagrisema (caglipitin/semaglutide) is a combination of caglipitin, a dual agonist of starch and calcitonin receptors, and semaglutide, a GLP-1 agonist. It is an effective long-term combination therapy for the treatment of type 2 diabetes and obesity.

Results from clinical trials of Cagrisema have shown that it exhibits superior results in weight loss and blood glucose reduction compared to caglipitin or semaglutide alone. In addition, Cagrisema significantly reduced patients' glycated hemoglobin (HbA1c) levels.

There are many peptide-based weight loss products on the market today, and HBY can offer these products and accept customizations as well:

Product Name	CAS Number	Availability
Semaglutide	910463-68-2	√
Tirzepatide	2023788-19-2	√
Retatrutide	2381089-83-2	√
Cagrilintide	1415456-99-3	√
Dulaglutide	923950-08-7	√
Cagrisema	Cagrilintide+Semaglutide	√
Liraglutide	204656-20-2	√
Survodutide	2805997-46-8	√
Ecnoglutide	2459531-73-6	√
Mazdutide	2259884-03-0	√

#### How does Cagrisema work?

Cagrisema is a novel dual-action therapy designed to effectively treat type 2 diabetes and obesity by combining semaglutide and cagrilintide, two complementary pharmaceutical ingredients.

Semaglutide is a long-acting GLP-1 receptor agonist that mimics the action of the natural gut hormone GLP-1, slowing digestion, enhancing satiety, and lowering blood sugar by increasing glucose-dependent insulin secretion. Cagliflozin peptide is a long-acting amyloid peptide analog with dual agonism that acts on amyloid peptide and calcitonin receptors, mimicking the effects of the amyloid peptide to further promote satiety and reduce intestinal sensitivity. Sugar absorption. Therefore, it may enhance the weight loss effects of Semaglutide.

Cagrisema is unique in that it combines the strengths of both Semarutide and Caglipitin peptides to form a powerful combination therapy. Semaglutide starts with blood sugar control, reducing sugar intake and absorption. Caglipitin starts by regulating appetite, reducing food intake, and increasing energy expenditure. This two-pronged mechanism allows Cagliflozin to provide a more comprehensive treatment for patients with type 2 diabetes and obesity.

#### 3. What are the potential benefits of Cagrisema?

**Effective in controlling blood glucose:** Cagrisema has shown significant efficacy in lowering blood glucose levels in clinical trials. The Trifecta trial demonstrated that Cagrisema significantly lowered HbA1c levels by 1.8% compared to placebo, and in the DURATION-6 trial, Cagrisema lowered HbA1c by 1.7% compared to dulaglutide. This shows that Cagrisema significantly reduces HbA1c levels, which is a key indicator of long-term glycemic control.

**Significant weight loss:** The dual mechanism of action of Cagrisema reduces body weight by decreasing appetite and increasing satiety and energy expenditure. In the STEP obesity trial, cagrisema resulted in an average weight loss of 12.1% compared to placebo and significantly improved cardiometabolic markers. In the RESET-O trial, cagrisema resulted in an average weight loss of 16.4% and significant reductions in body fat percentage and waist circumference compared to placebo.

**Improved Cardiovascular Health:** The positive effects of cagrisema on glycemic and weight control may also translate into improved cardiovascular health. Studies have shown that Cargresem lowers blood pressure, improves blood lipids, and reduces the risk of cardiovascular events.
